Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

AUTHORS Rat Genome Sequencing Consortium.
TITLE Direct Submission
JOURNAL Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 9, 2003 this sequence version replaced gi:22771158.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GBLP
Center clone name: CH230-5J15
---------- Summary Statistics
Assembly program: Atlas;
Consensus quality: 225401 bases at least Q40
Consensus quality: 228343 bases at least Q30
Consensus quality: 229973 bases at least Q20
Estimated insert size: 238404; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 241329: contig of 241329 bp in length
* 241330 241429: gap of unknown length
* 241430 242506: contig of 1077 bp in length.

            -------------- Project Information
                Center project name: L4135
                Center clone name: 22_K_13
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 125984 bases at least Q40
                Consensus quality: 132935 bases at least Q30
                Consensus quality: 135506 bases at least Q20
                Insert size: 182000; agarose-fp
                Insert size: 137020; sum-of-contigs
                Quality coverage: 3.3 in Q20 bases; agarose-fp
                Quality coverage: 4.4 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 31 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1004: contig of 1004 bp in length
            *     1005     1104: gap of 100 bp
            *     1105     2449: contig of 1345 bp in length
            *     2450     2549: gap of 100 bp
            *     2550     4378: contig of 1829 bp in length
            *     4379     4478: gap of 100 bp
            *     4479     5708: contig of 1230 bp in length
            *     5709     5808: gap of 100 bp

COMMENT     On Aug 6, 2004 this sequence version replaced gi:50428603.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: fst
                 Center clone name: 451B05

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
```

```
            Consensus quality: 170979 bases at least Q40
            Consensus quality: 171489 bases at least Q30
            Consensus quality: 171682 bases at least Q20
            Insert size: 175000; agarose-fp
            Insert size: 171855; sum-of-contigs
            Quality coverage: 10.31x in Q20 bases; agarose-fp
            Quality coverage: 10.50x in Q20 bases; sum-of-contigs
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 8 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP13-339P19; the clone sequenced to the right is RP11-395I6, 2000 bp overlap. Actual start of this clone is at base position 96857 of RP13-339P19; actual end is at base position 46946 of RP11-395I6.

Polymorphisms exist between AC098591, AC113150, AC068352 and AC046162. Data from AC113150, AC068352 and AC046162 was used to finish AC098591.

The sequence of AC037439 has been incorporated into AC098591.

            -------------- Summary Statistics
              Center project name: H_RG104I04
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project and the Washington University Genome Sequencing Center. For
            additional information about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7 or
            mailto:egreen@nhgri.nih.gov

            SOURCE INFORMATION:
            Clone CTB-104I4 is from the first release of the human BAC library
            CITB-978SK-B. The library contains cloned DNA from the male
            fibroblast cell line 978SK. See:  Shizuya et al., Proc. Natl. Acad.
            Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8
            (1996). This clone is available from Research Genetics, Inc.
            (http://www.resgen.com).
            VECTOR:  pBeloBAC11
            Selection:  chloramphenicol

            NEIGHBORING SEQUENCE INFORMATION:
            The actual start of this clone is at base position 1 of CTB-104I4
            actual end is at 191191 of CTB-104I4. The orientation of this clone
            is unknown.

            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 30 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2466: contig of 2466 bp in length
            *                   gap of unknown length
            *     2467     5597: contig of 3131 bp in length
            *                   gap of unknown length
            *     5598     7794: contig of 2197 bp in length
            *                   gap of unknown length
            *     7795    10770: contig of 2976 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:22855355.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            -------------- Project Information
                Center project name: GFWP
                Center clone name: CH230-104L19
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 222004 bases at least Q40
                Consensus quality: 224169 bases at least Q30
                Consensus quality: 225734 bases at least Q20
                Estimated insert size: 233845; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   241803: contig of 241803 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:24819227.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

           ------------- Project Information
            Center project name: GJKN
            Center clone name: CH230-103L19
           ------------- Summary Statistics
            Assembly program: Atlas 3.0;
            Consensus quality: 226044 bases at least Q40
            Consensus quality: 228017 bases at least Q30
            Consensus quality: 229406 bases at least Q20
            Estimated insert size: 234362; sum-of-contigs estimation
            Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
           --------------
           * NOTE: Estimated insert size may differ from sequence length
           *   (see 'http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
           * NOTE: This is a 'working draft' sequence. It currently
           * consists of 2 contigs. The true order of the pieces
           * is not known and their order in this sequence record is
           * arbitrary. Gaps between the contigs are represented as
           * runs of N, but the exact sizes of the gaps are unknown.
           * This record will be updated with the finished sequence
           * as soon as it is available and the accession number will
           * be preserved.
           *       1   242778: contig of 242778 bp in length
           *  242779   242878: gap of unknown length
           *  242879   244273: contig of 1395 bp in length.

            Primer A: No sequence submitted
            Primer B: No sequence submitted
            STS size: 549
            Protocol:
            WGS-discovery (WGS):
            Paired-end low-coverage whole genome shotgun reads were generated
            from 9 breeds
            (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
            Retriever, English
            Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
            Water Dog -100,000 each)
            and five other canids (Chinese, Alaskan, Indian and Spanish Gray
            Wolf as well as the
            Californian Coyote).
            The WGS reads were placed uniquely on the CanFam1.0 boxer assembly
            and SNP detection was
            carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
            485941 SNPs were
            annotated with alleles from the boxer and the breed or canid from
            which the particular
            read came. The validation rate for these SNPs was estimated at
            approximately 98%.
            WGA-discovery (WGA) of Boxer/Poodle SNPs:
            A second set of SNPs was generated using a similar methodology
            except that the contigs
            from the 1.5x poodle assembly (Kirkness 2003) were used instead of
            WGS reads. Since this
            sequence lacked base quality scores, arbitrary quality scores of
            phred 40 were assigned
            before the poddle segeunce was placed uniquely on the CanFam1.0
            boxer assembly and SNP
            detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated
            with alleles from the
            boxer and the poodle. The validation rate for these SNPs was
            estimated at approximately TBD%.
            Internal-WGA-discovery (I-WGA):
            A third set of SNPs were discovered by comparing reads in the WGA
            assembly. SNPs were
            defined as mismatch positions that had a base quality of >= 30 on
            both reads in a region
            that aligned without gaps, and with at most one additional mismatch
            in the ten flanking
            bases. For each allele, at least one additional read had to confirm
            it. 731476 SNPs were
            annotated with alleles between the two boxer alleles. The
            validation rate for these SNPs
            was estimated at approximately TBD%.

COMMENT     The cDNA library was made by using Botrytis cinerea T4 strain grown
            under nitrate deprivation conditions. The cDNA were cloned
            directionally in the pBSII vector.

            Primer A: No sequence submitted
            Primer B: No sequence submitted
            STS size: 724
            Protocol:
            23,021,928 chimpanzee whole genome shotgun reads were aligned to
            the Human genome NCBI
            Build 34 (hg16,July 2003). Chimp WGS reads were from 9 donors,
            including Clint (Pan
            troglodytes verus), 3 other Pan troglodytes verus chimps
            (Donald,Karlien,Yvonne), 3 Pan
            troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps
            of unknown origin
            (Gon,Unknown Chimp). Common names:  Pan troglodytes verus is the
            western chimp and Pan
            troglodytes troglodytes is the central chimp. To be included in
            chimpanzee SNP discovery, a
            read must be at least 500bp in length, at least 50% of its base
            calls must have Phred
            score >= 20, at least 30% of its base calls must satisfy
```

```
            SNQS(30,25)(single strand NQS, the
            base in question has Phred score >= 30, the surrounding 10 bases in
            the read have Phred
            score >= 25), and the read must have at least 200 bp SNQS(30,25)
            bases. Reads not uniquely
            placed in the genome and read pairs whose two ends were not
            consistently placed were
            discarded. After above filtering, NQS(30,25) standard was applied
            to all pairs of
            overlapping reads to call NQS bases and SNPs. Alignments (between
            two reads) with less
            than 100 NQS bases or with SNP rate > 0.01 were discarded. To
            exclude alignment between two
            copies of a single read, comparisons between two reads that share
            95% of their genome
            alignments (>=95% bases of read A and >=95% bases of read B were
            placed at the same locus
            of human genome) were discarded.

TITLE Direct Submission
JOURNAL Submitted (12-OCT-2004) Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: trop@sanger.ac.uk
COMMENT Sanger Xenopus tropicalis EST/cDNA project.
This sequence is from a Xenopus Gene Collection (XGC) library, from a library constructed by Aaron M. Zorn. cDNA was prepared from RNA extracted from gastrula embryos. EcoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the 5' end and NotI at the 3' end.
Vector: pCS107; Site_1: EcoRI; Site_2: NotI
Host: Escherichia coli XL1-blue.

XX
CC This sequence represents a fragment of the DNA encoding the ribosome-
CC inactivating protein (RIP) of the invention. The RIP is designated
CC bouganin, and comprises a linear polypeptide (26 kDa) with a pI of 9.0,
CC where the amino-terminal end exhibits 50 % homology with the sequence
CC shown in AAW67752. The proteins and conjugates form compositions in
CC treating various human diseases or conditions, including cancer, graft-
CC versus-host disease, organ transplant rejection, type I diabetes,
CC multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus,
CC and myasthenia gravis. The proteins are also useful as therapeutic anti-
CC viral agents in plants and mammals. Compositions containing the
CC polynucleotide encoding bouganin are useful in gene therapy. Bouganin
CC possesses low non-specific toxicity, which makes it very suitable for use
CC as the toxic agent in various immunotoxins. (Updated on 27-AUG-2003 to
CC correct OS field.)

PT   Nucleic acid array useful for detecting cancer associated nucleic acid,
PT   comprises two or more nucleic acid probes.
XX
PS   Disclosure; SEQ ID NO 1095; 198pp; English.
XX
CC   The invention relates to a nucleic acid array for detecting a cancer
CC   associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC   The invention also relates to a peptide array comprising two or more
CC   isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC   that binds to a polypeptide, an isolated antibody or its fragment which
CC   binds to a polypeptide, which is prepared by immunizing a host animal
CC   with a composition comprising the polypeptide or its antigen binding
CC   fragment and collecting cells from the host expressing antibodies against
CC   the antigen or its antigen binding fragment, a composition comprising the
CC   antibody and a carrier, a method of screening for anticancer activity, a
CC   method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC   method of treating cancer and a method of inhibiting expression of a CA
CC   nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC   nucleic acids. The antibody is useful for detecting the presence or
CC   absence of cancer cells in an individual which involves contacting cells
CC   from the individual with the antibody and detecting a complex of a CA
CC   protein from the cancer cells and the antibody, where the detection of
CC   the complex correlates with the presence of cancer cells in the
CC   individual. The composition is useful for inhibiting growth of cancer
CC   cells in an individual or for delivering a therapeutic agent to cancer
CC   cells in an individual. The invention is also useful for diagnosing
CC   cancer, for treating cancer and for inhibiting expression of a CA gene in
CC   a cell. This sequence represents murine cancer-associated genomic DNA of
CC   the invention.

PT   Novel human cancer associated protein encoded within open reading frame
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Disclosure; SEQ ID NO 115; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a murine CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   New recombinant nucleic acid molecules and polypeptides from Gossypium
PT   hirsutum, useful for producing plants with improved biological
PT   characteristics (e.g. improved plant cold or drought tolerance).
XX
PS   Claim 1; SEQ ID NO 223; 14pp; English.
XX
CC   The invention relates to a recombinant polynucleotide comprising any of
CC   the 58798 Cotton plant cDNA sequences mentioned in the specification.
CC   Also a recombinant polypeptide comprising any of the 58798 amino acid
CC   sequences mentioned in the specification and producing a plant having an
CC   improved property. Producing a plant having an improved property
CC   comprises transforming a plant with a recombinant construct comprising a
CC   promoter region functional in a plant cell operably joined to a
CC   polynucleotide comprising a coding sequence for a polypeptide associated
CC   with the property, and growing the transformed plant. The polypeptide is
CC   useful for improving plant cold tolerance, manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, improving plant
CC   drought tolerance, providing increased resistance to plant disease,
CC   producing galactomannan (or lignin or plant growth regulators), improving
CC   plant heat tolerance, improving plant tolerance to herbicides, increasing
CC   the rate of homologous recombination in plants, improving plant tolerance
CC   to extreme osmotic conditions or to pathogens or pests, improving yield
CC   by modification of photosynthesis, modifying seed oil or protein yield
CC   and/or content, improving yield by modification of carbohydrate, nitrogen
CC   or phosphorus use and/or uptake, or improving yield by providing improved
CC   plant growth and development under at least one stress condition. The
CC   polynucleotide and polypeptide may also be used in recombinant DNA
CC   constructs, in physical arrays of molecules, as plant breeding markers,
CC   or in computer-based storage and analysis systems. The present sequence
CC   is a Cotton plant cDNA of the invention. NOTE: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20040181830. However only 6585
CC   polynucleotide sequences were available, the remaining 52213
CC   polynucleotides and all 58798 protein sequences were not present.

XX
PT Identifying a stress condition to which a plant cell has been exposed and
PT producing plants with increased tolerance to these abiotic stresses.
XX
PS Claim 144; SEQ ID NO 5069; 577pp + Sequence Listing; English.
XX
CC The invention relates to identifying a stress condition to which a plant
CC cell has been exposed, comprising: (a) contacting nucleic acid
CC representative of expressed polynucleotides in the plant cell with an
CC array or probes representative of the plant cell genome; and (b)
CC detecting a profile of expressed polynucleotides in the plant cell
CC characteristic of a stress response. The method is useful in the
CC production of transgenic plants, cells and seeds and in producing plants
CC with increased tolerance to abiotic stress. The present sequence is that
CC of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used
CC in methods of the invention. Note: The sequence data for this patent is
CC not represented in the printed specification but is based on sequence
CC information supplied to Derwent by the European Patent Office

PT Identifying at least one gene involved in plant resistance or response to
PT pathogenic infection for conferring resistance or tolerance to a plant to
PT bacterial, fungal or viral infection by determining or detecting plant
PT gene expression.
XX
PS Claim 27; SEQ ID NO 2286; 899pp; English.
XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present sequence was used to
CC illustrate the invention.

PT Analyzing proliferative diseases of breast cells, useful e.g. for
PT diagnosis, prognosis and treatment of breast cancer, by determining
PT methylation status of specific genes.
XX
PS Claim 1; Page; 22pp; German.
XX
CC This invention describes a novel method of analysing proliferative
CC diseases of breast cells by determining the methylation status of certain
CC genes. The invention also describes nucleic acids or their complements,
CC oligomers, especially oligonucleotides or peptide nucleic acid oligomers,
CC that hybridise to, or are identical with, any of the nucleic acids, the
CC preparation of an oligomer array for analysing proliferative diseases of
CC breast cells that are associated with the methylation status of CpG
CC dinucleotides of the genes by bonding at least one oligomer to a solid
CC phase and a kit comprising a bisulfite reagent and the oligomer. The
CC nucleic acids are genomic sequences (5'- and/or regulatory and/or CpG-
CC rich regions). The base sequence of the oligomer includes at least one
CC CpG island, especially with C in the middle third of the sequence. The

CC process involves a genomic DNA sample treated chemically, specifically
CC with a bisulfite reagent, to convert non-methylated C to uracil or some
CC other base having base-pairing properties different from those of C.
CC Fragments of the treated DNA are then amplified, using primers and a
CC polymerase and the methylation status of the genomic CpG dinucleotides is
CC determined by analysis of the amplicons, particularly by hybridisation to
CC the oligomer, optionally with extension of the hybridised oligomer by at
CC least one base, or detection is by sequencing. The amplification may use
CC methylation-specific primers. Alternatively, genomic DNA is extracted
CC from a sample and digested with methylation-specific restriction enzymes,
CC then the digestion fragments detected, optionally after amplification. In
CC either method, more than 10 fragments of 100-200 bp are amplified in a
CC single reaction vessel, using a heat-resistant DNA polymerase in PCR. The
CC amplicons carry detectable markers, e.g. fluorophores, radioisotopes
CC and/or releasable fragments of known mass that can be detected by mass
CC spectrometry. The method is used for characterisation, classification,
CC differentiation, staging, phase-estimation, diagnosis and/or therapy of
CC proliferative diseases of breast cells. The method provides very specific
CC classification of proliferative diseases, allowing better treatment. It
CC can both characterise methylation status and detect single-nucleotide
CC polymorphisms. This sequence represents human gene used to illustrate the
CC method of the invention. NOTE: This sequence does not appear in the
CC printed specification but has been retrieved from Genbank.

PT New recombinant DNA construct, useful for improving plant tolerance to
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
PS Claim 1; SEQ ID NO 30640; 15pp; English.
XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

PT New combination comprising cDNAs that are differentially expressed in
PT prostate cancer, useful for diagnosing, treating or monitoring the
PT progression of treatment of prostate cancer.
XX
PS Claim 1; SEQ ID NO 398; 42pp; English.
XX
CC The invention relates to a combination comprising a number of cDNAs
CC expressed in prostate cancer. The invention also relates to a method for
CC detecting differential expression of one or more cDNAs in a sample
CC containing nucleic acids by hybridising a substrate with the nucleic
CC acids, thus forming one or more hybridisation complexes, detecting
CC hybridisation complex formation and comparing the complexes formed with
CC standard complexes, where differences between the standard and the sample
CC complex formation indicate differential expression of cDNAs in the
CC sample. The differential expression is diagnostic of prostate cancer. The
CC invention also relates to proteins and antibodies related to the cDNAs.
CC The combination is useful for diagnosing, treating or monitoring the
CC progression of treatment of prostate cancer. The antibodies are useful
CC for detecting prostate cancer. This sequence represents a human prostate
CC cancer cDNA of the invention.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.

XX
PS Claim 1; SEQ ID NO 84; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
PS Claim 6; SEQ ID NO 9; 687pp; English.
XX
CC The present invention describes an isolated nucleotide fragment (I)
CC comprising: (a) a nucleic acid sequence encoding a ryanodine receptor
CC having an amino acid sequence identity of at least 80% when compared to a
CC polypeptide selected from the group consisting of SEQ ID NO. 2, 4, 6, 8,
CC 128, 130, 144, or 146; or (b) the complement of (a). (I) comprises a
CC nucleotide sequence selected from 9 fully defined sequences (SEQ ID NO.
CC 1, 3, 5, 7, 9, 127, 129, 143, or 145). Also described: (1) a recombinant
CC construct comprising (I) operably linked to at least one regulatory
CC sequence; (2) a transformed host cell comprising the recombinant
CC construct; (3) a method to isolate (I) encoding ryanodine receptors and
CC related polypeptides; (4) an isolated polypeptide having ryanodine
CC receptor activity; (5) a method for evaluating at least one compound for
CC its ability to modulate calcium homeostasis; (6) a method for evaluating
CC at least one compound which modulates ryanodine receptor activity; (7) an
CC isolated nucleic acid fragment encoding an insect ion channel comprising
CC at least two fully defined polypeptide sequences selected from SEQ ID
CC NOs. 63-119 provided that the polypeptide sequences is not SEQ ID NO. 56,
CC 120-126; (8) a method for identifying a nucleic acid sequence encoding an
CC insect ion channel; (9) a method for expressing an isolated nucleic acid
CC fragment encoding a toxic insect ion channel; and (10) recombinant
CC construct comprising in the 5' to 3' direction a promoter operably linked
CC to an isolated nucleic acid fragment encoding a toxic insect ion channel.
CC The isolated nucleotide fragment (I) encoding a ryanodine receptor is
CC useful for the isolation of other pest ryanodine receptors and developing
CC of screens to identify insecticidally active compounds. The nucleic acid
CC fragments are useful as pesticides, fragments of protein for antibody
CC production, fragments of protein for determination of the structure of
CC insecticide binding sites and in the identification of insecticides that
CC disrupt the calcium balance in cells through other messengers that
CC interact with the receptor calcium release mechanism. The present
CC sequence is used in the exemplification of the present invention.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 463; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated genomic DNA of
CC the invention.

PT New type-1 ribosome-inactivating protein bouganin - useful in forming
PT immunotoxins for use in medicine and plant protection.
XX
PS Example 8; Page 22; 39pp; English.
XX
CC This sequence represents a PCR primer for DNA encoding the ribosome-
CC inactivating protein (RIP) of the invention. The RIP is designated
CC bouganin, and comprises a linear polypeptide (26 kDa) with a pI of 9.0,
CC where the amino-terminal end exhibits 50 % homology with the sequence
CC shown in AAW67752. The proteins and conjugates form compositions in
CC treating various human diseases or conditions, including cancer, graft-
CC versus-host disease, organ transplant rejection, type I diabetes,
CC multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus,
CC and myasthenia gravis. The proteins are also useful as therapeutic anti-
CC viral agents in plants and mammals. Compositions containing the
CC polynucleotide encoding bouganin are useful in gene therapy. Bouganin
CC possesses low non-specific toxicity, which makes it very suitable for use
CC as the toxic agent in various immunotoxins. (Updated on 27-AUG-2003 to
CC correct OS field.)

PT Synthetic DNA encoding gelonin plant toxin - provides nucleotide sequence
PT for synthetic gene for prodn. and cloning.
XX
PS Example 4; Fig 5; 45pp; English.
XX
CC The synthetic gelonin gene based on the sequence of Gelonium multiflorum
CC gelonin was prepd. by synthesising a number of oligonucleotides corresp.
CC to fragments of the gelonin gene and annealing and ligating to assemble
CC the intact gene. The oligonucleotides were designed to contain a codon
CC triplet for each amino acid in the corresp. gelonin fragment. Gelonin is
CC a ribosomal- inactivating plant toxin which inhibits protein synthesis.
CC The synthetic form of gelonin provides a plentiful, reproducible source
CC of gelonin which may be modified. See also AAQ38041-82. (Updated on 25-

PT   Spatially-addressable set of single exon nucleic acid probes, used to
PT   measure gene expression in human lung samples.
XX
PS   Claim 4; SEQ ID NO 23434; 634pp; English.
XX
CC   The invention relates to a spatially-addressable set of single exon
CC   nucleic acid probes for measuring gene expression in a sample derived
CC   from human lung comprising single exon nucleic acid probes having one of
CC   12614 nucleic acid sequences mentioned in the specification, or their
CC   complements or the 12387 open reading frames derived from the 12614
CC   probes. Also included are a microarray comprising the novel set of probes
CC   ; the novel set of probes which hybridise at high stringency to a nucleic
CC   acid expressed in the human lung; measuring gene expression in a sample
CC   derived from human lung, comprising (a) contacting the array with a
CC   collection of detectably labeled nucleic acids derived from human lung
CC   mRNA, and (b) measuring the label detectably bound to each probe of the
CC   array; identifying exons in a eukaryotic genome, comprising (a)
CC   algorithmically predicting at least one exon from genomic sequences of
CC   the eukaryote; and (b) detecting specific hybridisation of detectably
CC   labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,
CC   having a fragment identical to the predicted exon, the probe is included
CC   in the above mentioned microarray; assigning exons to a single gene,
CC   comprising (a) identifying exons from genomic sequence by the method
CC   above and (b) measuring the expression of each of the exons in several
CC   tissues and/or cell types using hybridisation to a single exon
CC   microarrays having a probe with the exon, where a common pattern of
CC   expression of the exons in the tissues and/or cell types indicates that
CC   the exons should be assigned to a single gene; a peptide comprising one
CC   of 12011 sequences, mentioned in the specification, or encoded by the
CC   probes/open reading frames (ORF). The probes are used for gene expression
CC   analysis, and for identifying exons in a gene, particularly using human
CC   lung derived mRNA and for the study of lung diseases such as asthma, lung
CC   cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC   disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC   tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC   Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC   histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis,
CC   Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC   dyskinesis, pulmonary hypertension and hyaline membrane disease. The
CC   present sequence is a single exon probe open reading frame of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New recombinant DNA construct comprising a promoter positioned to provide
PT   for expression of a polynucleotide encoding a polypeptide from a
PT   microbial source, useful for producing plants with improved properties.
XX
PS   Claim 1; SEQ ID NO 29234; 122pp; English.
XX
CC   The invention relates to a recombinant DNA construct comprising a
CC   promoter functional in a plant cell, where the promoter is positioned to
CC   provide for expression of a polynucleotide encoding a polypeptide from a
CC   microbial source. The invention also relates to a transformed plant
CC   comprising the recombinant DNA construct and a method of producing a
CC   transformed plant having an improved property. The plant is a crop plant
CC   such as maize or soybean. The method of producing a transformed plant
CC   having an improved property comprises transforming a plant with the
CC   recombinant DNA construct and growing the transformed plant, where the
CC   polynucleotide or polypeptide is useful for improving plant properties.
CC   The recombinant DNA construct is useful for producing plants with
CC   improved plant properties, e.g. improved cold, heat or drought tolerance,
CC   tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC   increased resistance to plant disease, better growth rate by modification
CC   of the cell cycle pathway with plant growth regulators, increased rate of
CC   homologous recombination, modified seed oil or protein yield and/or
CC   content, improved yield by modification of carbohydrate, nitrogen or
CC   phosphorus use and/or uptake, by modification of photosynthesis or by
CC   providing improved plant growth and development under at least one stress
CC   condition, improved lignin production or improved galactomannan
CC   production. This sequence represents a bacterial polynucleotide used in
CC   the scope of the invention. Note: The sequence data for this patent did
CC   not form part of the printed specification but was obtained in electronic
CC   format from USPTO at seqdata.uspto.gov/sequence.html.

PT   New human genome-derived single exon nucleic acid probes useful for human
PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 1; SEQ ID NO 17632; 80pp; English.
XX
CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above- mentioned amino acid
CC   sequences (optionally with conservative amino acid substitutions), an
CC   isolated antibody that binds specifically to a peptide cited above,
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 13250; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
CC   of the mRNA because they are often obtained from oligo-dT primed cDNA
CC   libraries. Such ESTs are not well suited for isolating cDNA sequences
```

CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 29222; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences. (Updated on 27-OCT-2003 to
CC standardise OS field)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     EcoRI; Site_2: NotI; This normalized library was
                     constructed from 1 million independent clones. cDNA
                     synthesis was initiated using an oligo(dT) primer, using
                     methylated C in the first strand synthesis reaction.
                     Following this first strand reaction, double-stranded cDNA
                     was blunted, ligated to NotI adapters, digested with
                     EcoRI, size-selected, and cloned into the NotI and EcoRI
                     compatible sites of a custom modified MCS of the
                     pBluescript (KS+) vector. The library was normalized in 2
                     rounds using conditions adapted from Soares et al., PNAS
                     (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
                     (1996): 791, except that a significantly longer
                     reannealing hybridization was used."

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
